

Algebra and Geometry Review 14

<p>1. Fill in the blanks:</p> <p>$13^2 = \underline{\hspace{2cm}}$ $16^2 = \underline{\hspace{2cm}}$</p> <p>$14^2 = \underline{\hspace{2cm}}$ $17^2 = \underline{\hspace{2cm}}$</p> <p>$15^2 = \underline{\hspace{2cm}}$ $18^2 = \underline{\hspace{2cm}}$</p>	<p>2. Find the length of the lower base of the trapezoid shown.</p> <div style="text-align: center;">  </div>
<p>3. Simplify:</p> $(3 - 5\sqrt{2})(2 + 5\sqrt{2})$	<p>4. Continuing with problem #2, what is the area of the trapezoid?</p>
<p>5. If $(0, 32)$ and $(100, 212)$ are points on a line, what is the equation of the line that goes through both of these points?</p>	<p>6. A man on top of building looks down toward a park at an angle of depression of 24°. If the park is 1000 feet from the base of the building, how tall is the building?</p>
<p>7. Solve this system of equations:</p> $\begin{aligned} x + 2y &= -4 \\ \underline{3x - 2y} &= \underline{8} \end{aligned}$	<p>8. Define the word oblique.</p>
<p>9. Simplify. Write your answer using only positive exponents.</p> $\left(\frac{x^2 y^{-1} z^{-2}}{2x^0 y^2 z^{-4}} \right)^{-3}$	<p>10. In an isosceles triangle, one of the angles measures 100° and one measures 40°. What must be the measure of the third angle?</p>
